

- tool to calculate cost in 5 years
- Digitisation
- no structure in the company
- Instead of email using sharespace (website creator)
- specific aspects of company
- 2 or 3 different forms
- user interface is javascript
- first initial step is hardest
- focus as whole in multiple different areas
- 16's up to us (more better if graphical)
- people who we are presenting to will be more understanding
- doesn't matter if web or app based
- Preferably web based (more space to use)
- colours don't matter (but can provide)
- Environmentally colours
- towards next meeting if we have the functions if we have 5 give standard 3 and premium the other 2
- A lot of market research
- where do we want the profit to come from
- There are already lots of ROI calculators but not focus on energy and are static
- no one is building one for innovation
- How will we show the calculations
- with all data can make good graphs or powerpoint

Security

- Data security (not sensitive information)
- need to contact the creator if problem (contact us form)
- Profile based
- not as strict as us
- When user clicks save (how do we secure it - API, Firewall)
- Prepare for DDoS (adding limits to calculator)
- Implementing AI (can replace objective in AI)
- Don't have to use AI
- users won't be able to see others data (All be behind of server)
- users need to agree with terms of service before using (standard terms of service)
- We can focus on one thing (like oil and gas)
